

**AMENDMENTS TO THE ABSTRACT**

Please substitute the following paragraph(s) for the abstract now appearing in the currently filed specification:

Output properties of a fuel cell can be improved by using a single cell structure [[1393]] having an anode [[102]] and an oxidizing agent electrode [[108]] in both sides of a solid electrolyte membrane [[114]] and an evaporation inhibiting layer [[1390]] covering the surface of the cathode [[108]] which is not in contact with the solid electrolyte membrane [[114]].
